PorchLight Communications to Provide Fiber Optic Services to Stone Ridge Village

Colorado Springs, Colo. – June 19, 2006 – PorchLight Communications announced today that it has been selected to provide fiber optic network services to Stone Ridge Village. An advanced fiber optic infrastructure allows efficient delivery of next generation IP communication services such as local and long distance telephone service, high speed internet access, home security and DirecTV Digital Television under one billing platform, on a single network.

“Gone are the days when you needed multiple vendors for telephone, internet access, home security, and television. With PorchLight's residential fiber networks, next generation communication services are now a reality and the promises of connected communities can be realized.” said Corey Smith, CTO of PorchLight Communications.

“Porchlight has worked with my development team from day one, helping design and implement a reliable, secure, and ultra high-bandwidth network for our homeowners.” said Dana Duncan, Managing Partner for Stone Ridge Village.

“Developers like Dana Duncan have many options available yet realize the benefits of fiber to the home in their communities. Upcoming services on the horizon will require the capabilities of fiber to the home networks that will simply not be available over other types of media such as copper. No one has ever approached the myriad of capabilities found in fiber optics, in fact the theoretical limits of fiber have yet to be predicted. It is this 'future proof' quality that appeal to developers, builders, and homeowners.” said Robert Athey, CEO of PorchLight Communications.
